

## **Department of CSE**

Laboratory Manual		
Course:	B.Tech.	
Year & Semester:	III – II	
Class:	CSE	
Subject:	Scripting Languages Lab Manual	
Regulation:	R22	

### BALAJI INSTITUTE OF TECHNOLOGY AND SCIENCE (AUTONOMOUS)

### **B.Tech (Department of Computer Science & Engineering)**

### SCRIPTING LANGUAGES LAB

### **Course Outcomes:**

- Ability to understand the differences between Scripting languages and programming Languages.
- Implement logic to solve mathematical and string manipulation problems in Ruby, Perl, TCL.
- Able to Handle File and Data Operations like file handling, list manipulation, and user inputs in scripting languages.
- Apply control structures to perform decision-making and repetitive tasks.
- Enhance Practical Programming Abilities with hands-on experience in scripting for automation, validation, and optimization tasks.

### **List of Experiments:**

- 1. Write a Ruby script to create a new string which is n copies of a given string where n is a non-negative integer.
- 2. Write a Ruby script which accept the radius of a circle from the user and compute the parameter and area.
- 3. Write a Ruby script which accept the users first and last name and print them in reverse order with a space between them.
- 4. Write a Ruby script to accept a filename from the user print the extension of that
- 5. Write a Ruby script to find the greatest of three numbers.
- 6. Write a Ruby script to print odd numbers from 10 to 1.
- 7. Write a Ruby script to check two integers and return true if one of them is 20 otherwise return their sum.
- 8. Write a Ruby script to check two temperatures and return true if one is less than 0 and the other is greater than 100.
- 9. Write a Ruby script to print the elements of a given array
- 10. Write a Ruby program to retrieve the total marks where subject name and marks of a student stored in a hash.
- 11. Write a TCL script to find the factorial of a number
- 12. Write a TCL script that multiplies the numbers from 1 to 10.
- 13. Write a TCL script for sorting a list using a comparison function.
- 14. Write a TCL script to (i) create a list (ii) append elements to the list (iii) Traverse the list Concatenate the list.
- 15. Write a TCL script to comparing the file modified times.
- 16. Write a TCL script to Copy a file and translate to native format.
- 17. a) Write a Perl script to find the largest number among three numbers.
  - b) Write a Perl script to print the multiplication tables from 1-10 using subroutines.
- 18. Write a Perl program to implement the following list of manipulating functions a) Shift b) Unshift c)Push
- 19. a) Write a Perl script to substitute a word, with another word in a string.
  - b) Write a Perl script to validate IP address and email address.
- 20. Write a Perl script to print the file in reverse order using command line arguments.

Laknepally (V), Narsampet (M), Warangal District - 506 331, Telangana State, India

(AUTONOMOUS)

Accredited by NBA (UG - CE, ME, ECE & CSE) & NAAC A+ Grade
(Affiliated to JNT University, Hyderabad and Approved by AICTE, New Delhi) AUTONOMOUS www.bitswgl.ac.in, email: principal@bitswgl.ac.in, Ph:98660 50044, Fax: 08718-230521

1. Write a Ruby script to create a new string which is n copies of a given string where n is a nonnegative integer

def multiple\_string (str, n)

return str\*n

end

print multiple\_string ('a', 1),"\n"

print multiple\_string ('a', 2),"\n"

print multiple\_string ('a', 3),"\n"

print multiple\_string ('a', 4),"\n"

print multiple\_string ('a', 5),"\n"

### **Output:**

a

aa

aaa

aaaa

aaaaa

Laknepally (V), Narsampet (M), Warangal District - 506 331, Telangana State, India

(AUTONOMOUS)

Accredited by NBA (UG - CE, ME, ECE & CSE) & NAAC A+ Grade
(Affiliated to JNT University, Hyderabad and Approved by AICTE, New Delhi) UTONOMOUS www.bitswgl.ac.in, email: principal@bitswgl.ac.in, Ph:98660 50044, Fax: 08718-230521

2. Write a Ruby script which accept the radius of a circle from the user and compute the parameter and area.

radius = 0.0perimeter = 0.0area = 0.0print "Input the radius of the circle: " radius = gets.to\_f perimeter = 2 \* 3.141592653 \* radius area = 3.141592653 \* radius \* radius puts "The perimeter is #{perimeter}." puts "The area is #{area}."

### **Output:**

Input the radius of the circle: 10

The perimeter is 62.83185306.

The area is 314.1592653.

3. Write a Ruby script which accept the user's first and last name and print them in reverse order with a space between them

```
puts "Input your first name: "
fname = gets.chomp
puts "Input your last name: "
lname = gets.chomp
puts "Hello #{Iname} #{fname}"
Output:
Input your first name:
ece
Input your last name:
students
Hello students ece
Method II:
puts "Input your first name: "
fname = gets.chomp
puts "before change #{fname}"
rev = "
for i in 1.. fname. length
  rev += fname[fname.length - i]
end
puts "after change #{rev}"
puts "Input your last name: "
lname = gets.chomp
puts "before change #{lname}"
rev = "
for i in 1..lname.length
    rev += lname[lname.length - i]
end
puts "after change #{rev}"
```

4. Write a Ruby script to accept a filename from the user print the extension of that

file = "/user/system/test.rb"

# file name

fbname = File.basename file

puts "File name: "+fbname

# basename

bname = File.basename file,".rb"

puts "Base name: "+bname

# file extention

ffextn = File.extname file

puts "Extention: "+ffextn

# path name

path\_name= File.dirname file

puts "Path name: "+path\_name

### **Output:**

File name: test.rb

Base name: test

Extention: .rb

Path name: /user/system

Laknepally (V), Narsampet (M), Warangal District - 506 331, Telangana State, India

18. Write a Perl program to implement the following list of manipulating functions

```
a) POP b) Push c) Shift d) Un shift
```

```
POP: The pop function will remove and return the last element of an array
my @names = ('cse', 'ece', 'eee');
my $last_one = pop @names;
print "$last_one\n";
print "@names\n";
Output:
eee
cse ece
```

**Push:** The push function can add one or more values to the end of an array

```
my @names = ('Foo', 'Bar');
push @names, 'Moo';
print "@names\n";
my @others = ('Darth', 'Vader');
push @names, @others;
print "@names\n";
```

### **Output:**

Foo Bar Moo

Foo Bar Moo Darth Vader

**Shift:** If you imagine the array starting on the left-hand side, the shift function will move the whole array one unit to the left. The first element will "fall off" the array and become the function's return value.

```
my @names = ('EEE', 'CSE', 'ECE');
my $first = shift @names;
print "$first\n";
print "@names\n";
```

### **Output:**

EEE

**CSE ECE** 

ISO 9001:2015 Certified Institution Balaji Institute of Technology & Science

Un Shift: This is the opposite operation of shift. unshift will take one or more values (or even 0 if that's what you like) and place it at the beginning of the array, moving all the other elements to the right.

```
my @names = ('Foo', 'Bar');
unshift @names, 'Moo';
print "@names\n";
my @others = ('Darth', 'Vader');
unshift @names, @others;
print "@names\n";
```

### **Output:**

Moo Foo Bar

Darth Vader Moo Foo Bar

Laknepally (V), Narsampet (M), Warangal District - 506 331, Telangana State, India

19. Write a Perl script to substitute a word, with another word in a string.

```
use strict;
use warnings;
# Define the input string and the words to replace
my $input_string = "The quick brown fox jumps over the lazy dog";
my $word_to_replace = "fox";
my $replacement_word = "cat";
# Perform the substitution
$input_string =~ s/$word_to_replace/$replacement_word/g;
# Print the modified string
print $input_string;
```

### **Output:**

The quick brown cat jumps over the lazy dog

b) Write a Perl script to validate IP address and email address.

```
#!/usr/bin/perl
use strict;
use warnings;
# Define the IP address and email address to validate
my $ip_address = "192.168.0.1";
my $email_address = "example@example.com";
# Validate the IP address
if (\sup_{0-9}[0-9][0-9][0-9][0-9]])\.){3}(25[0-5][2[0-4][0-9][01]?[0-9][0-9]]\.)
9][0-9]?)$/) {
  print "Valid IP address: $ip_address\n";
} else {
  print "Invalid IP address: $ip_address\n";
# Validate the email address
if (\$email address =~ /^[\s@]+@[^\s@]+.[^\s@]+$/) {
  print "Valid email address: $email_address\n";
} else {
  print "Invalid email address: $email address\n";
}
Output:
```

Valid IP address: 192.168.0.1

Valid email address: example@example.com
